

Mix-up :

$$\text{cercle} = \begin{bmatrix} 1 \\ 0 \end{bmatrix}; \text{ carré} = \begin{bmatrix} 0 \\ 1 \end{bmatrix}$$

$$\left. \begin{array}{l} 70\% \text{ cerclé} \\ 30\% \text{ carré} \end{array} \right\} \begin{bmatrix} 0,7 \\ 0,3 \end{bmatrix}$$

for px in pixels :

$$\text{img}[px] = 0,7 \times \text{cerclé}[px] + 0,3 \times \text{carré}[px]$$

→ torchvision.transforms.Mixup()

Faut trouver le meilleur couple entre
Batch size et learn rate
